01

Introduction

What is Eventum?

Eventum is a decentralized ecosystem that connects events, people, and the digital economy - all powered by the **\$EVNT token** on BNB Smart Chain.

Events are everywhere - concerts, conferences, meetups, festivals. Billions of dollars flow through the event industry every year, but the infrastructure behind it is stuck in the past. Ticketing platforms take massive cuts, loyalty programs don't travel with you, and organizers have little control over their own communities.

Eventum changes that. We're building a platform where:

- **Organizers** get direct access to their audience, transparent payments, and tools to reward their communities.
- **Attendees** participate with on-chain rewards tied to participation as features ship.
- **Investors** get into a growing ecosystem at the ground floor, backed by fair tokenomics and a clear roadmap.

Why \$EVNT?

\$EVNT is the ecosystem utility token on BNB Smart Chain for payments, incentives, and published access mechanics within the platform. The published maximum supply is **9.5 billion EVNT**, including a staking incentives budget; verify live parameters on BscScan against official announcements.

Why Now?

The event industry is worth over \$1 trillion globally and growing fast. Web3 is maturing. The tools are here. Eventum is positioned to bridge the gap between real-world experiences and on-chain value - giving everyone a stake in the events they love.

Get Started

This whitepaper outlines our vision, tokenomics, presale structure, roadmap, security measures, and the team behind Eventum. Read it carefully before participating in the presale.

02

The Vision

The Problem

The event industry is massive - over **\$1 trillion** flows through it every year. But the way it works hasn't changed much in decades:

- Ticketing platforms charge outrageous fees and control access to your own audience
- Resale markets are full of bots, scams, and fake tickets
- Loyalty programs are locked inside walled gardens - your rewards don't travel with you
- Organizers give up control, data, and revenue to middlemen who add cost without adding value
- Attendees get nothing back for their engagement beyond a used ticket stub

The entire system is designed to extract value from the people who actually create it - the organizers and the attendees.

The Solution

Eventum flips this model. Instead of middlemen controlling the flow, we put it on-chain - transparent, verifiable, and owned by the community.

For Organizers

Create and manage events with direct audience access. Set your own rules for ticketing, pricing, and rewards. Get paid instantly - no waiting for platform payouts. Build a loyal community with real token incentives.

For Attendees

Pay for events with \$EVNT and earn rewards for participating. Own your loyalty - take your rewards anywhere in the ecosystem. Get exclusive access, discounts, and perks for holding \$EVNT as published features roll out.

For the Community

A transparent ecosystem where everyone can see how value flows. Fair tokenomics with no hidden inflation. A growing platform where your tokens become more useful over time.

Long-term Vision

Become the global standard for decentralized event infrastructure. From local meetups to global festivals - any event, anywhere, can plug into Eventum and instantly access trustless payments, verifiable ticketing, and community-powered engagement.

BEP-20 Standard

What Can You Do With \$EVNT?

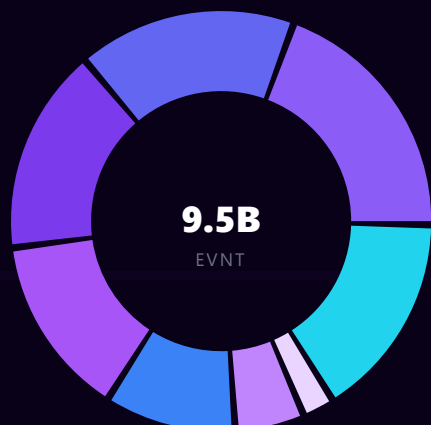

- **Pay for events** - Use \$EVNT as the primary currency across the Eventum platform for tickets, services, and experiences.
- **Earn rewards** - Get \$EVNT for participating in events, engaging with the community, and contributing to the ecosystem.
- **Stake for rewards** - Lock tokens in the official staking pool when it is deployed and earn emissions from the dedicated on-chain budget.
- **Access exclusive perks** - Holders can receive early access, tiers, and campaigns when those modules are enabled in the product.

Contract Addresses

Official mainnet contract addresses will be published after deployment and verification on BscScan. Until then, only trust addresses announced through our official website and social channels at eventum-token.com.

Fair distribution

- **Ecosystem & rewards (~20%)** - Community programs, incentives, and retention scenarios (see exact token count in the table).
- **Liquidity (~17%)** - Preparation of pools and supporting liquidity on DEX/CEX as listings go live.
- **Presale (~16%)** - Early participants across twelve planned stages over about twelve months (indicative \$1M aggregate target; on-chain caps prevail).
- **Marketing (~14%)** - Growth, partnerships, and campaigns.
- **Reserve (~10%)** - Operational buffer, liquidity support, compliance, and contingencies.
- **Advisors (~5%)** - Strategic advisors, subject to vesting.
- **Team (~2%)** - Long-term alignment; schedules are enforced on-chain where applicable.
- **Staking & emissions (~16%)** - Dedicated 1.5B EVNT budget for staking rewards and related emissions, released per published pool rules.

Vesting

Team & advisor tokens locked 24 - 36 months. Smart contract enforced.

Reserve

Treasury used for long-term delivery, liquidity, and compliance.

Distribution

Percentages are shares of max supply. On-chain parameters are binding.

04 Presale Plan

How it works

The presale is organized into **4 stages**. Each stage has its own window, pricing, token allocation, and multiplier to listing. **Payments:** primarily BNB on BNB Smart Chain; additional BEP-20 options may appear in the live app when enabled.

Presale stages (plan)

| | TOKENS | PRICE | X TO LISTING |
|--|--------------------|-----------------|---------------|
| Stage 1 | 380,000,000 | \$0.0034 | ~29.4x |
| Launch window, earliest community pricing, initial liquidity narrative. Raise target: \$1,292,000. | | | |
| Stage 2 | 380,000,000 | \$0.0053 | ~18.8x |
| Expand outreach, partner pilots, tighten conversion tooling. Raise target: \$2,014,000. | | | |
| Stage 3 | 380,000,000 | \$0.0076 | ~13.1x |
| Product demos, organizer onboarding tests, feedback loop. Raise target: \$2,888,000. | | | |
| Stage 4 | 380,000,000 | \$0.0100 | 10.0x |
| Final tranche before rotating to public markets / next milestones. Raise target: \$3,800,000. | | | |

Exact prices, caps, and timelines are displayed live on the presale page at eventum-token.com
The on-chain contract is the ultimate source of truth.

How to Buy

- Go to the Eventum website and connect your wallet (MetaMask, Coinbase Wallet, Trust Wallet, or WalletConnect)
- Make sure you're on BNB Smart Chain - the site will prompt you to switch if needed
- Enter the amount of BNB you want to spend
- Click "Buy EVNT" - confirm the transaction in your wallet
- Done! Your tokens are allocated and will become claimable according to the vesting schedule below

Vesting & Unlocks

Your purchased tokens don't all unlock at once - this protects the price and rewards patient holders.

| | | |
|--------------------|-------------|--|
| TGE | 10% | Immediate unlock at listing |
| Cliff | 0% | Cliff: no unlock for 30 calendar days after the TGE date |
| Linear | 90% | 335 days gradual unlock |
| Full Unlock | 100% | ~12 months after TGE |

Why vesting? Vesting aligns distribution over time with published unlock rules, reduces concentrated early liquidity events, and supports incentive alignment among participants.

05

Roadmap

Below is an illustrative phased roadmap spanning 2026-2028. Timing may change based on product delivery, security work, partnerships, and market conditions; refer to official updates for authoritative status.

2026**ACTIVE PHASE**

Phase 1 - Foundation, marketing, and early community building

2027**UPCOMING**

Phase 2 - Market entry, fundraising, and MVP development

2027**UPCOMING**

Phase 3 - Product scaling, app release, wallet integrations

2027**UPCOMING**

Phase 4 - Ecosystem growth, listings and partnerships

2028**UPCOMING**

Phase 5 - Mass adoption, global partnerships, and service expansion

06

Staking

Future Staking Module (Post-Listing)

Staking is a **planned feature** that will launch **after the token listing**. It is a separate smart contract from the EVNT token, presale, and vesting contracts.

Users will be able to **lock EVNT tokens** in a rewards pool and earn emission rewards according to on-chain parameters (rate, duration, total budget), subject to security review and deployment.

How Staking Differs from Presale and Vesting

Presale

Primary distribution: user pays in BNB or accepted BEP-20 tokens; contract credits EVNT purchase (and/or routes to vesting, depending on deployment).

Vesting

Time-locked release: user claims EVNT that was allocated to their address when the schedule unlocks.

Staking (Future)

Optional lock of already-held EVNT in a pool to earn reward tokens (often the same or another token), under separate rules.

Important notes

- Staking requires a deployed, audited pool and published emission rules.
- The staking module will be announced officially through eventum-token.com when ready.
- Parameters (reward budget, duration, rates) will be published before launch.

07

Security & Trust

Our Commitment

Your funds and tokens are safe with Eventum. Security isn't an afterthought - it's built into every layer of the project, from the smart contracts to the website.

Smart Contract Security

- **Industry-standard practices** - Our contracts follow best practices from OpenZeppelin, the most trusted library in blockchain security
- **Transparent parameters** - Token economics follow the published maximum supply and deployment configuration; verify the live contract on BscScan.
- **Reentrancy protection** - All sensitive functions are protected against the most common smart contract attacks
- **Emergency pause** - If something unexpected happens, the presale can be paused to protect users - without affecting existing allocations

Verification & Transparency

- All contracts will be **verified on BscScan** so anyone can read and audit the code
- Transaction history, token allocations, and presale progress are fully **visible on-chain** - nothing is hidden
- Contract addresses are published only through **official channels** - always double-check before interacting

Website Security

- **Encrypted connection** - The website runs over HTTPS, so your data is protected in transit
- **No data stored** - We don't store your wallet address, private keys, or any personal data on our servers. All interactions go directly from your browser to the blockchain
- **Content Security Policy** - The site is hardened against injection attacks and unauthorized scripts

Your Responsibility

While we do everything in our power to keep the ecosystem safe, crypto always carries risk. Here are a few tips:

- **Never share your private keys or seed phrase** - with anyone, ever. The Eventum team will never ask for them
- **Verify the URL** before connecting your wallet - make sure it's the official eventum-token.com site
- **Use a hardware wallet** for large amounts - it's the gold standard for security
- **DYOR (Do Your Own Research)** - review product scope and risk before participating.

08

Team

Who We Are

Eventum is built by a team of blockchain veterans, creative minds, and event industry enthusiasts. We came together with a shared belief: the event industry is ripe for disruption, and Web3 is the key.

We're not a faceless corporate entity. We're builders who've been in the crypto trenches - shipping products, growing communities, and navigating the wild ups and downs of the blockchain world. We've seen what works and what doesn't, and we're building Eventum with those lessons in mind.

What Drives Us

- **Clear updates** - Status and scope are communicated through official channels.
- **Community-first allocation** - The team allocation is a small share with vesting, as published in the tokenomics model.
- **Long-term planning** - Product delivery is planned beyond a single release cycle.
- **Utility focus** - EVNT is tied to product capabilities as they are released.

Skin in the Game

The team holds just **2% of the total supply**, and it's fully vested - meaning we can't sell until the project has proven itself over time. Our incentives are aligned with yours: the better Eventum does, the better we all do.

Advisors

Our advisors hold **6% of the total supply** (also vested) and provide strategic guidance on exchange listings, partnerships, regulatory navigation, and ecosystem growth. They're experienced operators who've helped launch and scale multiple blockchain projects.

Connect With Us

The only official channels for Eventum are:

- **Website:** eventum-token.com
- **Telegram:** Official community group
- **X (Twitter):** Official account
- **Discord:** Official server

Important: Never trust unsolicited messages from anyone claiming to represent Eventum. We will never DM you first or ask for your private keys.
